

Fiat Engine Driven Industrial Water Pump Mechanically as new

£POA

Fiat Six cylinder diesel engine driving a centrifugal water pump with a Primary Electrical Pump.

This all came out of a building dedicated to operating sprinkler systems in the event of a fire breaking out. The main pump is electrically driven and Secondary Diesel Pump is a back up in the event of the electricity supply failing. To my knowledge it was never run in the event of a fire. Has

done very little work. Mechanically it is as new. Good thing about this engine is its simplicity having no complex electronics. This diesel engine driven water pump has a lot of life left in it and may be good to use for flood prevention, irrigation, pumping flood water or refitted as a sprinkler

Product Details

Category/Type	Plant and Machinery
Make	Fiat Engine Driven Industrial Water Pump
Model	Mechanically as new
Year	-
Mileage	-

Lodge Farm, Nailstone, Nuneaton, Warwickshire, CV13 0QP
